

(a) ALL runs pooled: 3,150 across 12 values of a , 8 budgets, three optimisers (Clopper–Pearson 95%)

(b) three-optimiser comparison at $a = 1.25$ ($n = 600$)
all nine Fisher tests null, min $p = 0.674$

(c) R beats both factors — except family B ($\beta = 1$)
